

# IDEAL SCHOOL OF ENGINEERING, RETANG-752054

<b>DISCIPLINE: CIVIL ENGINEERING</b>	<b>SEMESTER: 3<sup>RD</sup> SEM</b>	<b>NAME OF THE TEACHING FACULTY:</b> ER. PURAK SUNDARAY & ER. MEERA BEHERA
<b>SUBJECT: STRUCTURAL MECHANICS (TH-1)</b>	No of Days/ Per week class allotted: <b>5 Class P/W (75)</b>	Semester From Date: 15/09/2022 To Date: 22/12/2022 No. Of Weeks: <b>15</b>
<b>WEEK</b>	<b>CLASS DAY</b>	<b>THEORY TOPICS</b>
1 <sup>st</sup>	1 <sup>st</sup>	Basic Principle of Mechanics: Force, Moment, support conditions.
	2 <sup>nd</sup>	Conditions of equilibrium, C.G & MI, Free body diagram.
	3 <sup>rd</sup>	Review of CG and MI of different sections.
	4 <sup>th</sup>	Introduction to stresses and strains: Mechanical properties of materials – Rigidity, Elasticity, Plasticity,
	5 <sup>th</sup>	Introduction to stresses and strains: Other Mechanical properties of materials – Brittleness, Ductility,
2 <sup>nd</sup>	1 <sup>st</sup>	Types of stresses -Tensile, Compressive and Shear stresses
	2 <sup>nd</sup>	Types of strains - Tensile, Compressive and Shear strains.
	3 <sup>rd</sup>	Complimentary shear stress - Diagonal tensile / compressive Stresses due to shear, Elongation and
	4 <sup>th</sup>	Longitudinal and Lateral strains, Poisson's Ratio, Volumetric strain,
	5 <sup>th</sup>	Computation of stress, strain, Poisson's ratio, change in dimensions and volume etc.
3 <sup>rd</sup>	1 <sup>st</sup>	Hooke's law - Elastic Constants, Derivation of relationship between the elastic constants.
	2 <sup>nd</sup>	Revision of previous classes about stress, strain and material property and all.
	3 <sup>rd</sup>	Behaviour of ductile and brittle materials under direct loads.
	4 <sup>th</sup>	Stress Strain curve of a ductile material, Limit of proportionality.
	5 <sup>th</sup>	Elastic limit, Yield stress, Ultimate stress, Breaking stress.
	1 <sup>st</sup>	Percentage elongation, Percentage reduction in area, Significance of percentage elongation and reduction in

4 <sup>th</sup>	2 <sup>nd</sup>	Deformation of prismatic bars due to uniaxial load, Deformation of prismatic bars due to its self weight.
	3 <sup>rd</sup>	Principal stresses and strains: Occurrence of normal and tangential stresses,
	4 <sup>th</sup>	Concept of Principal stress and Principal Planes, major and minor principal stresses.
	5 <sup>th</sup>	Minor and major stresses and their orientations, Mohr's Circle and its application to solve problems of complex
5 <sup>th</sup>	1 <sup>st</sup>	Stresses in beams due to bending: Bending stress in beams.
	2 <sup>nd</sup>	Theory of simple bending – Assumptions – Moment of resistance – Equation for Flexure.
	3 <sup>rd</sup>	Stresses in beams due to bending: Flexural stress distribution.
	4 <sup>th</sup>	Curvature of beam – Position of N.A. and Centroidal Axis.
	5 <sup>th</sup>	Flexural rigidity – Significance of Section modulus.
6 <sup>th</sup>	1 <sup>st</sup>	Shear stresses in beams: Shear stress distribution in beams of rectangular.
	2 <sup>nd</sup>	Circular and standard sections symmetrical about vertical axis.
	3 <sup>rd</sup>	Stresses in shafts due to torsion: Concept of torsion.
	4 <sup>th</sup>	Basic assumptions of pure torsion, torsion of solid and hollow circular sections.
	5 <sup>th</sup>	Polar moment of inertia, torsion shearing stresses.
7 <sup>th</sup>	1 <sup>st</sup>	Angle of twist, torsional rigidity, equation of torsion.
	2 <sup>nd</sup>	Combined bending and direct stresses: Combination of stresses Combined direct and bending stresses.
	3 <sup>rd</sup>	Maximum and Minimum stresses in Sections, Conditions for no tension.
	4 <sup>th</sup>	Middle third/fourth rule, Core or Kern for square,
	5 <sup>th</sup>	Limit of eccentricity and
8 <sup>th</sup>	1 <sup>st</sup>	Rectangular and circular sections, chimneys, dams and retaining walls.
	2 <sup>nd</sup>	Details of Retaining Walls and Chimneys.
	3 <sup>rd</sup>	Columns and Struts, Definition.

	4 <sup>th</sup>	Short and Long columns, End conditions.
	5 <sup>th</sup>	Equivalent length / Effective length.
9 <sup>th</sup>	1 <sup>st</sup>	Revision of last classes about column and strut.
	2 <sup>nd</sup>	Revision of last classes about Equivalent and effective Length.
	3 <sup>rd</sup>	Slenderness ratio, Axially loaded short and long column.
	4 <sup>th</sup>	Euler's theory of long columns, Critical load for Columns with different end conditions.
	5 <sup>th</sup>	Shear Force and Bending Moment: Signs Convention for S.F. and B.M
10 <sup>th</sup>	1 <sup>st</sup>	S.F and B.M of general cases of determinate beams with concentrated loads and udl only.
	2 <sup>nd</sup>	S.F and B.M diagrams for Cantilevers, Simply supported beams and Over hanging beams.
	3 <sup>rd</sup>	Position of maximum BM, Point of contra flexure, Relation between intensity of load, S.F and B.M.
	4 <sup>th</sup>	Revision of last class about of point of contra flexure.
	5 <sup>th</sup>	Revision of previous classes about S.F. and B.M.
11 <sup>th</sup>	1 <sup>st</sup>	Revision of S.F and B.M sign convention.
	2 <sup>nd</sup>	Revision of about Beam and Load and trusses.
	3 <sup>rd</sup>	Introduction: Shape and nature of elastic curve (deflection curve).
	4 <sup>th</sup>	Relationship between slope deflection and curvature (No derivation).
	5 <sup>th</sup>	Importance of slope and deflection.
12 <sup>th</sup>	1 <sup>st</sup>	Revision of last class about slope and deflection and its importance.
	2 <sup>nd</sup>	Revision of last class about Elastic curve.
	3 <sup>rd</sup>	Slope and deflection of cantilever and simply supported beams under concentrated and
	4 <sup>th</sup>	Uniformly distributed load (by Double Integration method, Macaulay's method).
	5 <sup>th</sup>	Revision of last class about UDL( Uniformly Distributed Load)

13 <sup>th</sup>	1 <sup>st</sup>	Revision of last class about Slope and deflection.
	2 <sup>nd</sup>	Indeterminacy in beams, Principle of consistent deformation/compatibility
	3 <sup>rd</sup>	Analysis of propped cantilever.
	4 <sup>th</sup>	Fixed and two span continuous beams by principle of superposition
	5 <sup>th</sup>	SF and BM diagrams (point load and udl covering full span).
14 <sup>th</sup>	1 <sup>st</sup>	Introduction: Types of trusses, statically determinate and indeterminate trusses
	2 <sup>nd</sup>	Degree of indeterminacy, stable and unstable trusses, advantages of trusses.
	3 <sup>rd</sup>	Revision of last classes about Trusses and Beam and sign convention of S.F and B.M.
	4 <sup>th</sup>	Types of Trusses and their uses.
	5 <sup>th</sup>	Different types of roof trusses and their uses
15 <sup>th</sup>	1 <sup>st</sup>	Previous year questions discussion and revision.
	2 <sup>nd</sup>	Again revision of chapter 08 and questions discussion.
	3 <sup>rd</sup>	Revision of last chapter 05 and previous year questions will be discussed.
	4 <sup>th</sup>	Remind the important questions about all chapters.
	5 <sup>th</sup>	Important questions will be discussed for the semester Exam.
